TaskTracker

● ● ●

Simplify The Activity

Abstract

Task Tracker is a project management application that can handle both simple and complex projects for startups, software developers, and other target teams. It tracks the progress of a project. Task Tracker's design is clean and elegant design—something that is supposed to be "beautiful to look at all day long." With **Task Tracker**, you can use **Kanban**. Backlogs are shown as a running list of all features and User Stories added to the project

Objective Of Project

Task Tracking web Application to Track project management in companies to make their work in given time period or in effectively

Software Requirements

Operating system - Windows, mac, linux

Front-end - HTML, CSS, JAVASCRIPT, PHP

Database / Back-end - ClearDB, Mysql, Postgresql, Oracle, MySQLi, MsSqlODBC

Web Server - Bluemix

Method

We did research on how the project releases take placed in companies and how other Companies make their time management during their projects. We did this because we want all decryption on project management process

According this information to improve project management systems and make their work easy we make one web application called **Task Tracker.**

Result

To test our web application called Task Tracker, we got the support of our class. We invites two teams from our class and told them to managed their mini project on **Task Tracker**. They really like it because of this they can manage their project in systematic manner and completed it.
